

LK15 HOME CONTROL KIT

Everything in your house under control. Control lights and appliances from your chair. Switch lights in your house from the front door.

This is now all possible for a low price with the LK15 Home Control Kit. The LK15 Home Control Kit is a complete basic package, which you can expand endlessly.

The set consists of:

- A beautiful slim design Remote Control (KR22), which you can use to control 4 different addresses, including a dim function. Because of the slim design the KR22 is easy to take with you, for instance on your key chain.
- A Transceiver Module (TM13). This is the basis for the Marmitek X-10 System. The Transceiver Module converts the signals from wireless Marmitek Controllers to the Marmitek X-10 protocol on the existing house wiring. By this it is possible to control all Marmitek X-10 Modules through the existing house wiring.
- A Bayonet or screw-in Lamp Module (LM15). You can put this Lamp Module directly into the lamp socket. Can also be used with low-energy lamps. It is not possible to dim with this Lamp Module.

The set lets you switch a lamp and an appliance by remote control. The set works according to the standardised Marmitek X-10 protocol and therefore can be expanded endlessly. For instance: extra Lamp/Appliance Modules, wall switches, sensors etc.

The set is supplied in a beautiful blister packaging, which you can re-close.
