Situation 1

If your country is listed above, and the specifications are exactly the same as in the list, then you simply place your order and we will automatically send you the right plug for your country!

Situation 2

If your country is listed above, but the plug you need is different from the plug that is listed above, then you can send us an e-mail to clarify the situation.

Note that the voltage used in your country must be in the 220-240V range and the frequency must be in the 50Hz range. Also remember that you can only choose from the plug types as shown in the table on top of the first page.

E.g. you live in France – Normally we would send you the E type Plug. If you do not want to receive the E type plug, but the F type plug, then you first complete your order through our internet shop and afterwards you send us an e-mail (to orders@intellihome.be) with the request to send you the F type plug in stead of the E type plug.

Situation3

If your country isn't listed above, but the voltage used in your country is between 220-240V and the frequency is 50Hz, then you can also order through our internet shop if the plug type you require is the E, F, G, L or J type plug. After ordering, you can send us an e-mail (to orders@intellihome.be) in which you explain which plug type you would like to receive.
